CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.
SUBUNIT: Heterodimer with a type-II receptor.
SUBCELLULAR LOCATION: Type I membrane protein.
TISSUB SPECIFICITY: Widely expressed.
SIMILARITY: Belongs to the Ser/Thr protein kinase family. TGPB receptor subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Proton acceptor (By similarity).

T. Expression of bone morphogenic protein receptor la in the mouse.";

Submitted (AUG-2003) to the EMBL/GenBank/DDBJ databases.

C. --- SUBCELLULAR LOCATION: Type I membrane protein (By similarity).

C. --- SIMILARITY Belongs to the Ser/Thr protein kinase family.

CC -!- CAUTION: The sequence shown here is derived from an EMBL/GenBank/DDBJ databases.

CC -!- CAUTION: The sequence shown here is derived from an EMBL/GenBank/DDBJ whole genome shotgun (WGS) entry which is perliahmary date and cc - p-Finorinory pass a key role in the control of the eukaryotic cell cycle. It is required in higher cells for entry into S-phase and mitosis. Component of the kinase complex that phosphorylates the repetitive C-terminus of RNA polymerase II. Catalytic component of MPF (By similarity).

CC - SUBUNIT: Forms a stable but non-covalent complex with cyclin B in mature occytes (By similarity).

CC -: SUBUNIT: Forms a stable but non-covalent complex with cyclin B in mature occytes (By similarity).

CC -: SUBUNIT: Porms a stable but non-covalent complex with cyclin B in mature occytes (By similarity).

CC -: SUBUNIT: Porms a stable but non-covalent complex with cyclin B in mature occytes (By similarity).

CC -: SUBUNIT: Porms a stable but non-covalent complex with cyclin B in mature occytes (By similarity).

CC -: SUBUNIT: Porms a stable but non-covalent complex with cyclin B in mature occytes (By similarity).

CC -: SUBUNIT: Porms a stable but non-covalent complex with cyclin B in mature occytes (By similarity).

CC -: SUBUNIT: Porms of the Ser/Thr protein kinase family.

Proc. Natl. Acad. Sci. U.S.A. 98:5104-5109(2001).

-! SUBUNIT: Interacts with AIPI. Part of a complex consisting of AIPI, ACVR2, ACVRB and MADH3 (By similarity).

-! SUBCELULAR LOCATION: Type I membrane protein (By similarity).

-! SIMILARITY: Belongs to the Ser/Thr protein kinase family.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              유
                                                                                                                                        Truncated bone morphogenic protein (BMP) receptors and serine/threonine kinase receptors may be used in compositions to inhibit the effects of BMP's such as BMP-2 and BMP-4. The truncated receptors pref. comprise the ligand binding domain, but not the serine/threonine kinase and transmembrane domains. The truncated proteins are soluble and will be excreted into supernatant by recombinant mammalian cells expressing them. Such cells can be delivered in a medium or matrix which partially impedes their mobility, thereby localising the cells to a site of bone or cartilage injury. invention can be used for treating osteopenia, osteoporosis, fractures and other disorders related to low bone mineral content and density. As such, these compositions improve bone mineralization and can be described as TGF-beta antagonists and/ or BMP-antagonists. This polynucleotide is a bone morphogenetic protein receptor type I DNA sequence given in an exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This invention relates to a novel antibody or antigen-binding fragment that binds specifically to a sclerostin (SOST) polypeptide and impairs formation of a sclerostin homodimer. Specifically, it refers to an antibody that competitively inhibits binding of the sclerostin polypeptide to a bone morphogenic protein (BMP) Type I receptor binding site or a BMP Type II receptor binding site or a BMP type II receptor binding site. The present invention describes a hybridoma cell capable of producing the antibody and a host cell for antibody expression. Furthermore, it provides a nucleic acid molecule encoding a transforming growth factor-beta (TGP-beta) binding protein known as SOST (and also BEER) and methods for detection thereof.
                                                                                                                         receptor; bone morphogenetic protein; bone injury; antibody production; TGF beta antagonist; BMP-antagonist; osteopathic; osteopenias;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New antibody or antigen-binding fragment that binds specifically to sclerostin polypeptide and which inhibits binding of sclerostin polypeptide to a bone mothy polypeptide to a bone mothy mineral content or density.

The invention relates to a novel isolated antibody, or its antigenbinding fragment, which binds specifically to a sclerostin (SOST) polypeptide comprises any of 6 sequences having 190 or 213 amino acids, fully defined in the specification (ADX97341, Cor 213 amino acids, fully defined in the specification (ADX97341, Cor 2009ctlitively inhibits binding of the SOST polypeptide to a bone competitively inhibits binding of the SOST polypeptide to a bone competitively inhibits binding of the SOST polypeptide to a bone comprises a hybridoma cell producing the new antibody; a composition of further comprises a hybridoma cell producing the new antibody; a host cell that is capable of expressing the new antibody; a composition of further comprises a hybridoma cell producing the new antibody; a host cell that is capable of expressing the new antibody; a composition of physiological carrier; an immunogen comprising a peptide composition of physiological carrier; an immunogen comprising a peptide composition of physiological carrier; an immunogen comprising a peptide comprising of physiological carrier; an immunogen comprising a peptide compositionly between the SOST polypeptide; and methods for identifying an antibody that specifically that impairs binding of a BMP to the SOST polypeptide, that impairs SOST compositions have osteopathic activity. The SOST nucleic acids may be used in gene therapy. The composition and methods are useful correasing bone mineralization, which may treat or prevent diseases or conditions associated with low bone mineral density, such as conditions associated with low bone mineral density, such as expressed in the morphogenic protein type I receptor encoding DNA of the invent; and the such in the morphogenic protein type I receptor encoding DNA of the invent; and the such is protein type I receptor encoding DNA of the invent; and the such in the such protein type I receptor encoding DNA of the invent; and the such protein type I receptor encoding DNA of the invent; and the such protein type I rec

This invention relates to a novel antibody or antigen-binding fragment that binds specifically to a sclerostin (SOST) polypeptide and impairs formation of a sclerostin hondowner. Specifically, it refers to an antibody that competitively inhibits binding of the sclerostin cantibody that competitively inhibits binding of the sclerostin polypeptide to a bone morphogenic protein (BMP) Type I receptor binding site or a BMP Type II receptor binding site. The present invention describes a hybridoma cell capable of producing the antibody and a host cell for antibody expression. Furthermore, it provides a nucleic acid confecule encoding a transforming growth factor-beta (TGF-beta) binding protein known as SOST (and also BEER) and methods for detection thereof. Accordingly, such antibodies and osteopathic compositions of the and other disorders related to low bone mineral content and density. As such, these compositions improve bone mineral content and density. As such, these compositions improve bone mineral content and density. As such, these compositions improve bone mineral content and can be described as a TGF-beta antagonists. This polymolectide is a

WPI; 2005-081936/09. P-PSDB; ADW28801. This

New antibody or antigen-binding fragment that binds specifically to sclerostin polypeptide and which inhibits binding of sclerostin polypeptide to a bone morphogenic protein, useful for increasing bone mineral content or density. Disclosure; SEQ ID NO 119; 205pp; English.

invention can be used for treating osteopenia, osteoporosis, fractures and other disorders related to low bone mineral content and density. As such, these compositions improve bone mineralization and can be described as TGF-beta antagonists and/ or BMP-antagonists. This polynucleotide is a that binds specifically to a sclerostin (SOST) polypeptide and impairs formation of a sclerostin homodimer. Specifically, it refers to an antibody that competitively inhibits binding of the sclerostin polypeptide to a bone morphogenic protein (BMP) Type I receptor binding site or. a BMP Type II receptor binding site. The present invention describes a hybridoma cell capable of producing the antibody and a host cell for antibody expression. Furthermore, it provides a nucleic acid molecule encoding a transforming growth factor-beta (TGF-beta) binding protein known as SOST (and also BEER) and methods for detection thereof. Accordingly, such antibodies and osteopathic compositions of the bone morphogenetic protein receptor type 1 DNA sequence given in an exemplification of the invention. invention relates to a novel antibody or antigen-binding

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       요
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a novel isolated antibody, or its antigenbinding fragment, which binds specifically to a sclerostin (SOST)

CC binding fragment, which binds specifically to a sclerostin (SOST)

CC polypeptide. The SOST polypeptide comprises any of 6 sequences having 190

CC or 213 amino acids, fully defined in the specification (ADX97341,

CADX97360, ADX97398, ADX97400 to ADX97408). The antibody

CC competitively inhibits binding of the SOST polypeptide to a bone

morphogenic protein (BMP) Type I Receptor binding site and a BMP Type II

CC capable of binding to a BMP Type I Receptor binding site is

CC capable of binding to a BMP Type I Receptor binding site is

CC capable of binding to a BMP Type I Receptor binding site is

CC capable of binding to a BMP Type I Receptor binding site is

CC capable of binding to a BMP Type I Receptor binding site is

CC further comprises: a hybridoma cell producing the new antibody; a host

CC comprising the new antibody, or its antigen-binding fragment, and a

CC phygiological carrier; an immunogen comprising a peptide comprising 6, 7,

CC the SOST polypeptide; and methods for producing an antibody that specifically

CC that modulates a Transforming Growth Factor (TGF)-been signaling pathway,

CC that modulates a Transforming Growth Factor (TGF)-been signaling pathway,

CC that modulates a Transforming of a BMP to the SOST polypeptide, that impairs SOST homodimer formation, or that increases bone mineral content. The novel

Antibody and compositions have osteopathic activity. The SOST nucleic

C acids may be used in gene therapy. The composition and methods are useful

C or conditions associated with low bone mineral density, such as

C represents a rat bone morphogenic protein type I receptor encoding DNA of

C the invention.

The invention relates to a novel isolated antibody, or its antigenbinding fragment, which binds specifically to a sclerostin (SOST)

CC binding fragment, which binds specifically to a sclerostin (SOST)

CC polypeptide. The SOST polypeptide comprises any of 6 sequences having 190

or 213 amino acids, fully defined in the specification (ADX97341,

CC ADX97360, ADX97398, ADX97400, ADX97402 or ADX97408). The antibody

CC competitively inhibits binding of the SOST polypeptide to a bone

morphogenic protein (BMP) Type I Receptor binding site is

Receptor binding site, where the BMP Type I Receptor binding site is

capable of binding to a BMP Type I Receptor binding site is

Receptor binding to a BMP Type I Receptor binding site is

capable of binding to a BMP Type I Receptor polypeptide. The invention

further comprises: a hybridoma cell producing the new antibody; a host

cell that is capable of expressing the new antibody; a composition

comprising the new antibody, or its antigen-binding fragment, and a

physiological carrier; an immunogen comprising a peptide composition

CC ell that is capable of expressing corrective amino acids of

the SOST polypeptide; methods for producing an antibody that specifically

comprising the new antibody or its antigen-binding fragment, the novel

that modulates a Transforming Growth Factor (TGF)-beta signaling pathway,

that impairs binding of a BMP to the SOST polypeptide, that impairs SOST

composition and methods and composition and methods and underly and composition and methods in gene therapy. The composition and methods are useful

caids may be used in gene therapy. The composition and methods are useful

conficients associated with low bone mineral density, such as

costeopenia, osteoporosis or bone fractures. This polynucleotide sequence

represents a rat bone morphogenic protein type I receptor encoding DNA of

the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   285
